

'The Revolution in Skin Cleansing & Skin Care'

Ultra-microfibre tissue with 100% natural care substances

Filabé Moisturizing

Contains exclusively care substances

Facial tissues made of cosmetic ultra-microfibres with calming and moisturizing agents.

The ultra-fine cosmetic microfibre has a gentle peeling effect, stimulates blood circulation in the skin and cleanses deep pore, which makes the skin receptive for the calming and moisturizing agents of the prickly pear (*Opuntia ficus-indica*). The soothing effect on irritated skin is based on blocking the release of stress factors from the sensory nerve cells. The microencapsulation in the liposomes protects the agents of the prickly pear and supports their absorption deep into the skin, where they can take full effect sustainably.

The combination of cosmetic ultra-microfibres with agents embedded in liposomes is a successful innovation to optimally soothe, moisturize and nourish your skin. The gentle but thorough massage and peeling effect of the cosmetic ultra-microfibres on the skin stimulates blood circulation, smoothens and soothes the skin surface, and prevents clogged skin pores. Thus, the skin can absorb the agents better, faster and in higher concentration. The formula does not contain any preservatives, detergents, alcohol, emulsifiers or perfumes. This prevents irritation by these chemical additives. The tissues are suitable for all skin types.

Application: Moist the dry disposable tissue with water. Use the fleecy side to evenly and gently massage your face for 30 - 45 seconds. Do not wring or twist out the tissue after moistening. Use the entire surface of the tissue. Daily application is recommended.

Expiry date: the date on packing next to «Lot» is the production date of the product. As our products are good for more than 30 months, no expiry date is printed. After opening our products are good for use for at least 3 months.

Ingredients: Glycerin, Lecithin, Opuntia Ficus-Indica Stem Extract
